

# Distribution of the field measurements, by instrument and local climate zone (80 sites)

Same site, same minute. Each marker is one site; shape and colour both give the local climate zone, while the band, baseline and instrument label carry the instrument. Black line = median, band = interquartile range. View factors re-derived on 2026-09-14 (fisheye stitched, tilted cube-map; 79 sites — one pose failure excluded)

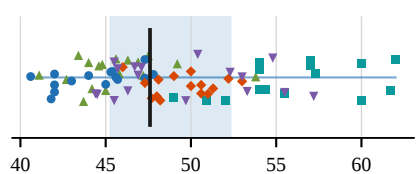

## Air temperature (°C)

Weather meter median 35.0 °C · 32.0–38.7

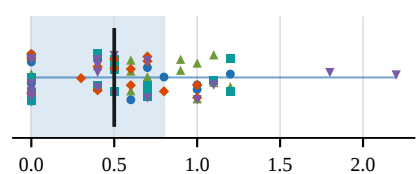

## Relative humidity (%)

Weather meter median 47.6 % · 40.6–62.0

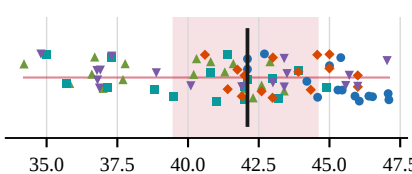

## Wind speed (m/s)

Weather meter median 0.50 m/s · 0.00–2.20

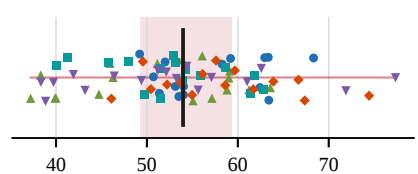

## Globe temperature (°C)

Globe thermometer median 42.1 °C · 34.2–47.1

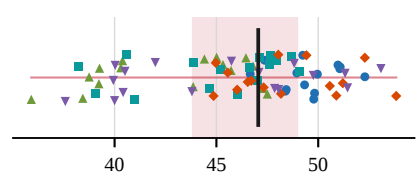

## Mean radiant temp., globe-derived (°C)

Globe thermometer median 54.0 °C · 37.2–77.3

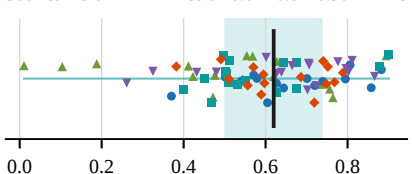

## Physiological equivalent temperature (°C)

Globe thermometer median 47.1 °C · 35.9–53.8

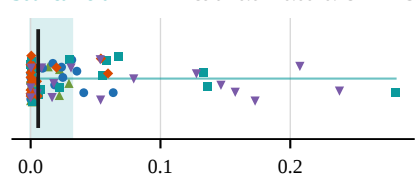

## Sky view factor

360° camera median 0.62 · 0.01–0.90 · n = 79

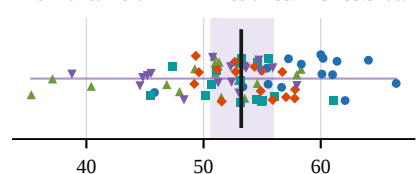

## Tree view factor

360° camera median 0.01 · 0.00–0.28 · n = 79

## Pavement surface temperature (°C)

Thermal camera median 53.2 °C · 35.3–66.4

● LCZ 1 · Buam 1   ■ LCZ 2 · Bosu   ▲ LCZ 3 · Seo 2   ◆ LCZ 4 · Yongho 1   ▼ LCZ 5 · Myeongjang

Globe temperature is back-calculated from the globe-derived  $T_{mrr}$  (ISO 7726, Ø0.05 m,  $\epsilon$  0.95). Tree view factor: median 0.01; 20 of the 79 sites are exactly 0 and 37 round to 0.00 — the sites were chosen without street trees. Pavement temperature: 90th percentile of sunlit pavement; thermal-camera clock offset (+35 min) verified, pairing unchanged.
